

VAC-CON CUTS THROUGH TOUGH EXCAVATING PROBLEMS WITHOUT CUTTING THROUGH WIRES

Our high power and high efficiency Hydro-Excavation machines make even the toughest excavating jobs easy and safe. Designed to power through all kinds of difficult terrain including frozen or unfrozen ground, Vac-Con Hydro-Excavators deliver more power to you.

These non-destructive excavating machines use pressurized water and a vacuum system to dig precisely and make visual identification of existing underground utilities like gas lines, fiber optics, T-1's, etc., so they can be easily avoided. Our Hydro-Excavating machines reduce the possibility of damage to all underground utilities.

Vac-Con's Hydro-Excavator gives you the power for safe, nondestructive digging for municipalities, utility companies and contractors.
