PRESVAC has been a **world leader** in **vacuum TECHNOLOGY** for over **30** years, and is recognized for the **QUALITY** and **reliability** of its' products.

Our leadership is something we have worked very hard for, and continue to focus on every day. Our customers have come to depend on the quality and reliability that is standard on everything we design and build, which only comes from years of experience.

From the beginning, PRESVAC SYSTEMS started building vacuum trucks for the Septic Pumping Industry. The repeat customers we have acquired over the past three decades is a testament to the quality and reliability of Presvac Vacuum Equipment. Over the years, our product line has expanded greatly, but the septic industry remains a core component of our business.

Over the years, PRESVAC SYSTEMS has built Carbon and Stainless Steel vacuum trucks to meet your needs. Now, with the introduction of the APV - PRESVAC'S ALUMINUM VACUUM TANK BODY, we answer our customers' demand for better designed, light weight aluminum tanks built the PRESVAC way.

We now offer you a **LARGER CAPACITY ALUMINUM VACUUM TANK**, built by **PRESVAC SYSTEMS**, that is **HALF THE WEIGHT OF CARBON STEEL**.

During the last years, the Metals Industry has worked to develop better and stronger Grades of Aluminum. Today, many products previously built solely out of Carbon Steel are being constructed out of aluminum because of the many advantages it offers.

PRESVAC APV tanks are made with 5454 Marine Grade Aluminum which provides the highest levels of corrosion and abrasion wear resistance, & with its bright finish, always looks good. Our confidence in material & design allow us to back our APV tanks with the best warranty we have ever offered on a vacuum tank.
